## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over the applicants prior art (from here on written APA) in view of Kiani (US Patent 6137064).

The APA teaches a conducting structure (fig. 4) of a multi-layer IC Board (Fig. 4, element 2) including a conducting wire (Fig. 4, element 1) placed on the board to have its ending pin (Fig. 11) and annular metal ring (Fig. 1, element 12) contact with two neighborhood apertures (Fig. 3, the adjacent apertures) and be welded (fig. 4) together for effective conduction. The APA does not teach a conducting rod being received in each aperture of the IC board, wherein the rod is conducted with each layer of the IC board. Kiani teaches a conducting rod (Fig. 1a, element 26) being received in an aperture of the IC board, wherein the rod is conducted with each layer of the IC board. It would have been obvious to one of ordinary skill in the art at the time of the invention to use the conductor rod, as taught by Kiani, in the apertures located on the IC board, taught by the APA, because doing so allows one to remove and replace the conductor if it were to get damaged or lose efficiency.
